Education

Washington University in St Louis US Jan 2024 - Present
PhD Student, Computer Science

Washington University in St Louis US Aug 2021 - Dec 2023
Master, Computer Science

Research Experience

Washington University in St Louis US Jan 2023 - Present

Real-Time Particle Distribution Estimation with FIMS (Fast Integrated Mobility Spectrometer)

- Developed a C++ multithreading real-time pipeline for FIMS instrument analysis and a complementary Python visualization tool.
- Integrated seamlessly with LabVIEW for data acquisition, addressing memory-sharing intricacies between LabVIEW and C++.
- Enhanced system performance, ensuring optimized data processing speed and stability on Raspberry Pi 4 in accordance with real-time benchmarks.

Drone-Based Real-Time Airborne Sensing

- Conducted research on real-time airborne gas distribution estimation using drones, focusing on adaptive sampling, Gaussian plume modeling, and Bayesian inference.
- Built estimation pipelines integrated with ArduPilot SITL simulations.
- Developed different sampling strategies (e.g., downwind pyramidal coverage, adaptive bounding boxes, ROI-based searches) to improve gas source localization.

Telescope Search for Gamma-Ray Bursts Using Likelihood Maps

- Developed multiple telescope search algorithms based on real-time gamma-ray burst likelihood maps, aiming to maximize cumulative likelihood coverage within strict timing and budget constraints.
- Accounted for telescope dynamics such as slew rate and dwell time in the optimization process.
- Analyzed trade-offs between competing strategies in terms of computing time, likelihood coverage, and overall efficiency under deadline-driven scenarios.

Performance Optimization for Atmospheric Simulation (GEOS-Chem)

- Worked with the GEOS-Chem High-Performance (GCHP) model to analyze MPI profiling data and identify performance bottlenecks in large-scale atmospheric chemistry simulations.
- Investigated load balancing strategies to improve model scalability and computational efficiency across distributed systems.

Skills

- Programming Languages: C++, C, python, javascript, php, java, html, css
- Libraries & Frameworks: OpenCV, Boost, PyTorch, Karas, React, Node.js, express
- Command-line Scripting Skills in Unix/Linux
- Other Skills: switching/routing/WLAN, TCP/IP
